Suggested Technical Topics

| Wireless Communications Topics | ACES Topics | Joint Topics |
|--|--|---|
| Phased array Antennas Smart Antennas and Arrays UWB Systems MIMO System Channel Modeling Wireless Testbed Mobile and PCS Antennas Active Antennas Advanced RF & Microwave Circuits Design Millimeter Wave and Terahertz Technologies DOA Estimation Techniques Ad-hoc and Adaptive Networks | Computational Methods: Integral Equation Differential Equation Asymptotic and High Frequency Hybrid and Multi-Physics EM Applications: RFID Systems Nanotechnology Inverse Scattering Propagation Analysis High Performance Computing: Parallel and GPU Computations Optimization Techniques EM Modeling: Electrically Large Structures Guided Structures | Time Domain Methods Metamaterials and FSS Artificial Materials and EBG EMC/EMI MEMS and MMIC Wave Propagation Radar Applications Bio-Electromagnetics Remote Sensing Applications Wideband and Multiband Antennas and Arrays Small Antennas Terahertz Antennas Printed and Conformal Antennas |

Submission Guideline

Authors of original work in the technical areas of interest are encouraged to submit a 2-page summary through the electronic submission system. Deadline for submission is November 30, 2015.
